

Hydraform O

Oil-based Concrete Form-Release Agent

Description

An oil-based chemical release agent specially formulated to ensure easy removal of form-work with a superior finish to surface of concrete.

A low viscosity chemically reactive liquid release agent which reacts with alkali in water at the interface of concrete/form-work to produce a soap-like film that ensures positive release from form with smooth concrete finish.

Object

Wherever quick and easy removal of form-work is required that does not impair or destroy surface finish such as in:

- Pre-cast factories
- For the construction of columns and beams
- Construction joints in concrete floor slabs

Advantage

- Easier removal of form-work
- Saves labor costs in form-removal
- Saves labor costs in repairing and finishing surfaces of concrete exposed to forms
- Reduces cost of further materials otherwise required for repairs to such surfaces exposed to forms

- Highly economical coverage rates may be obtained with no difficulty
- May be used on wooden, steel and plastic form-work
- Protects door frames and aluminium fittings from plaster and mortar
- Produces a clear reproduction of form-work design and texture
- Yields a clean, stain-free concrete surface that will readily accept paint and other coatings

Instruction for Use

Hydraform O is a liquid with very low viscosity.

It may be applied by spraying or by brushing.

May be used on dry or damp formwork;

Coverage

1 kg for approximately 15-30 m² on wooden form-work including plywood depending on absorption of form.

1 kg for approximately 30-50 m² on metal, plastic and other non-absorbing form-work .

Protect newly applied coat from rain.

Coverage rates may vary due to surface absorption and application.

Packing

210 L.
